

AG-304 ORGANAGRO® PODIUM SOIL MIX

AG Organics AG-304 OrganaGro® Podium Soil Mix has been designed for an ideal growing environment in large pots, planters and contained planting areas. Our OrganaGro® Podium Soil Mix was designed to provide the best start in life for a wide range of plant materials from vegetables to ornamental plants.

AG-304 OrganaGro® Podium Soil Mix has been carefully blended with Sandy Loam Top Soil, our OrganaGro® compost and selected fertilizers. The balance between soil moisture retention, drainage (1"-20" per hour) and promoting rapid plant establishment are all made possible by precisely mixing these quality components. These components provide the organic matter of 3% -6% (dry weight bases) and a balanced PH between 6.0 -7.9, which help to retain vital nutrients and healthy growth.

PLANTING RECOMMENDATIONS:

See engineered spec recommendations. Note: A 10%-15% shrinkage factor should be anticipated.

SMALL CONTAINER PLANTING:

See engineered spec recommendations.

INGREDIENTS:

Sandy Loam Top Soil, OrganaGro® Compost, selected Fertilizers
