

AG-380 WASHED NURSERY SAND

AG Organics provides a superior aggregate in our AG-380 Washed Nursery Sand. This product is derived from washed and screened crushed granite from local Southern California areas. Material washing eliminates the organic matter and almost all of the silt and clay.

AG-380 Washed Nursery Sand has many uses other than the Ready Mix and Precast Industries. It can also be used in the Landscape Industry for planting palm trees, in custom soil mixes and in Bio-Swale / Retention Pond and Drainage construction projects.

INGREDIENTS:

Crushed, screened and washed sand aggregates
